Day 5
NACL VS Security Groups:

Network ACL-
Level: This is an instance level.
Rule Types: It allows rules only.
State: It is stateful. The return traffic is automatically allowed.
Rule Order: All the rules are evaluated before the decision.

Security Groups-
Level: This is subnet level.
Rule types: it allows and deny the rules.
State: It is stateless. The return traffic must be explicitly allowed.
Rule order: Rules are evaluated in numerical order from lowest to highest.
